Art Unit: 1794

DETAILED ACTION

1. Applicant's response along with the Declaration under 37 CFR 1.132 has been fully considered. The claim objection has been withdrawn in view of Applicant's amendment. Claims 3 and 4 are canceled, and claims 1, 2, 5 and 6 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this
 Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 2, 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Galleguillos et al. (US 6,361,768 B1).
- 4. Galleguillos teaches an ampholytic copolymer having at least one anionic functional group and at least one cationic functional group (col. 4, line 36). The copolymer has a glass transition temperature of above 50 degree C, and is in a form of a fine powder with submicron particle size (abstract). Submicron particle size is a particle size of less than 1 um, which includes the claimed particle size. The copolymer can be used for paper coating (col. 19, line 2).

Art Unit: 1794

Response to Arguments

- 5. Applicant's argument is based on that when the composition of the prior art is employed as a paper coating, it is clear that the copolymer is no longer in the form of particles, but rather is in a dissolved state, thus the prior art has no disclosure of an ink receptive layer which contains polymeric organic particles provided on a support, as is presently claimed. This argument is not persuasive for the following reasons. The prior art teaches several uses of the copolymer, and one of the uses is paper coating; however, the prior art does not expressly teach that the copolymer is no longer in the form of particles when it is employed as the coating composition. In the ink jet recording medium art, a coating composition that is used to form an ink receiving layer can either be organic solvent based or water based. The coating composition may not even be organic solvent based or water based, if the coating is being cured via radiation curing.
- 6. Furthermore, the Declaration does not provide persuasive evidence because it is impossible to compare the invention of the prior art and the claimed invention. The solution of Experiment III is more saturated than the solution of Experiment I and the solution of Experiment II. In Experiment III, the solute is 30%, and on the other hand, in Experiment I, the solute is 4%, and in Experiment II, the solute is 4%. It is hard to conclude from the Declaration that the solute in Experiment I and the solute in Experiment III would completely dissolve if the solution in each experiment was more saturated as it was in Experiment III.
- 7. For the above reasons, claims 1, 2, 5 and 6 stand rejected.

Art Unit: 1794

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

- 9. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Betelhem Shewareged whose telephone number is 571-272-1529. The examiner can normally be reached on Mon.-Fri. 8:00AM-4:30PM.
- 11. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
